

The county has put out a link to a **broadband speed test** for towns to get a handle on service quality and unserved areas of Bridgton. Quality is most often a matter of speed. This data is most important for the purposes of funding.

Currently Bridgton is seen as having robust coverage (in the 90% range), which is contrary to experience and puts us out of reach of available grants that could help cover costs for expanding broadband in the town. It is also important to uncover actual speeds versus stated service speeds from your provider. If you do not have broadband access at your location, there is a place where you can report that as well. This will be most important to grant applications.

We hope everyone will take a moment to take the test. [Click here to access the County speed test.](#)
